Experience

Founding Engineer

Mar. 2025 – Jul. 2026

Enttor (backed by MaC Venture Capital)

New York, NY (Remote)

- Owned engineering on a six-person team across several pivots. Built and ran the platform behind \$160K+ in revenue over the first seven months of 2026
- Built a multi-tenant ad platform that puts Meta and TikTok campaign data on one metric schema. A Slack agent drives it, narrowing 165 tools to a per-message shortlist by keyword match with embedding retrieval as fallback
- Built an AI ad generator that takes a brand URL and returns finished creatives, then made those creatives editable again as layers using docTR, SAM 3, and LaMa inpainting. Moving rendering to GPUs took generation from an hour to under 5 minutes
- Put every external API behind a circuit breaker with jittered retry and traced each request end to end with OpenTelemetry
- Automated outreach and candidate sourcing with Playwright browser agents on Instagram, LinkedIn, and X. Per-platform pacing kept accounts usable for weeks rather than hours

Product Engineer

Feb. 2024 – Mar. 2025

Samsam (backed by Neo)

Bogotá, Colombia

- Built a mobile app in React Native and Expo and a web app in Next.js for shoppers and merchants, on TypeScript services with NestJS and Prisma
- Refactored core services reducing response times by 10% through improved Prisma queries and logic restructuring
- Built the alerting system that classified production errors by severity and routed each one to an accountable owner, using Sentry and Vercel monitoring

Software Engineer

Oct. 2022 – Dec. 2023

Heinsohn Human Global Solutions

Bogotá, Colombia

- Replaced manual deploys by moving the pipeline to Azure and building the CI/CD that released to every client server automatically
- Owned a Python/Flask reporting service running scheduled queries across client databases
- Built the Power BI dashboards clients used to track HR and payroll metrics, replacing reports assembled by hand

Education

Universidad de los Andes

Jan. 2024 – May 2025

Master of Science in Information Engineering

Bogotá, Colombia

Universidad de los Andes

Jan. 2019 – Dec. 2023

Bachelor of Science in Systems and Computer Engineering

Bogotá, Colombia

- Minors in Mathematics and Management (Dec. 2022)

Projects

Deep Learning for Crop Segmentation on Satellite Imagery

Dec. 2023

- Trained DeepLab V3+ in PyTorch, benchmarking MobileNet V3 against ResNet50 backbones, to segment oil palm plantations from Sentinel-1 SAR and Sentinel-2 red-band composites
- Reached 98.4% accuracy and 0.991 F1 on 10x10 km tiles, against 96% for a conventional machine learning baseline. Published at repositorio.uniandes.edu.co

Skills & Interests

Languages TypeScript, JavaScript, Python, SQL, Java

AI and ML LLM agents and tool use, RAG with pgvector, Anthropic and OpenAI APIs, MCP servers, PyTorch

Web and Infrastructure Next.js, React Native, NestJS, tRPC, Prisma, PostgreSQL, Redis, AWS, Docker, CI/CD

Interests Long-distance running and cycling
